

doku

Commandline tool to generate pdf from markdown.

Installation

Currently only way to install it is by cloning the repo and linking the package.

```
git clone git@github.com:volkanunsal/doku.git
cd doku
npm link

...

cd yourproject
npm link doku
```

Usage

In your project directory, create a file named `doku.json` . In this file there must be a property named `files` . The value of this property should be an array of relative paths of Markdown documents you'd like to convert.

```
{
  "files": ["test/example.md"]
}
```

Run the `doku` command.

```
doku
> PDF file created: file.pdf
```
